Professional Experience:

Feb 2019–July 2019

Software Intern • Kare4u Healthcare Solutions Pvt. Ltd

- Worked and Delivered a website with booking system to a client of the company alone.
- Collaborated with other developers to identify and alleviate number of bugs and errors in software.

July 2019–Continuing

Software Engineer • Kare4u Healthcare Solutions Pvt. Ltd

- Handled and delivered admin panel of an E-commerce platform called BuyerGains using Angular
- Developed an ionic app to support the clients for doctor's remote consultation.
- Currently working on an AI Enabled SPA for doctor's Electronic health record system using Angular

Technical Skills:

PROFICIENT: - HTML, CSS, JavaScript, Bootstrap, Angular, Ionic, WordPress, Umbraco, GSAP, S3

FAMILIAR: - FLUTTER, DOT NET CORE, Node JS

Project Profile:

Hiroshima MAAS

May 2019 – Jul 2019

Project description

Worked for Hiroshima MAAS app as an ionic app developer to design pages and integrate APIs as per the requirement.

NEC Corporation is a Japanese multinational information technology and electronics company, that came up with an outsourced project requirement of an online ticket booking application for intercity travellers. The requirement included an administration web portal where the plans and public transportation authorities would be managed, a mobile application which would be used by the end-users/travellers for booking and using them and IoT devices which would be used to scan the booked tickets for verifying the travellers respective passes.

Kanva Diagnostic

Aug 2019 – Oct 2019

Project description

Had gone onsite to gather the requirement from the client and transformed their vision into the end product.

- Single-handedly developed the UI requirements into the product.
- Delivered a mobile-friendly website with a theme complimenting the client's requirement.
- Used Umbraco CMS in order to provide regular maintenance to the website from the back office which is also client friendly to update.

Protech Solutions

Aug 2020

Project description

Designed a Landing page for Protech solutions as per their wireframes using HTML, CSS, JS and deployed the product to amazon using s3 and route53

BuyerGains

Nov 2019 – Present

Project description

A solution to squeeze the bridge between wholesale suppliers and buyers. A platform where buyers can collectively bargain for awesome deals on great products which is a win-win situation for both supplier and customer. With collective volume buyers are powerful enough to get attractive discounts throughout the year and suppliers are able to offer the best prices due to higher buying volumes and lower inventory costs.

Tech-Stack: Node.js, NestJS, Angular and MySQL, Flutter, Umbraco

I was responsible for building the complete admin panel using to upload the product, manage users, order, etc using Angular and also for making the landing page using Umbraco

Highlights:

- Integrated Bigcommerce Platform APIs to use their inventory management system.
- Collaborated with Paytm support team to integrate pre-auth and full payment method for orders.
- Initiated and proposed NestJs framework which is appreciated by senior management.
- Integrated firebase notification for mobile app notification and SmsCountry and SendGrid for respective sms and email configuration.

AI EHR SYSTEM

Mar 2019 – Present

Project description

Kare4u's nextgen AI EHR System is an Electronic Health Record system for hospitals and doctors to keep track of their patient's health records, disease, and medicine analysis and to increase the productivity of doctors by providing quick suggestions based on patient's current symptom and disease history and doctor's decision tree.

It also includes taking online appointments, managing doctor schedules, block calendar, pharmacy integration, decision tree, etc.

Tech-stack: Angular, Dot net Core 2.1

I am responsible for the Tab and Desktop friendly SPA using Angular and also have some hands-on in backend using dot net core

Highlights:

- Doctor can make their own decision tree as per disease and vitals to get personalized suggestions from the system
- Doctor can add medication templates and can print them by using voice commands.
